

### Setup a github environment

1. Install Git for windows (there is portable version)
2. Generate ssh key by Git Bash:  
\$ ssh-keygen -t rsa -C [youremail@example.com](mailto:youremail@example.com)
3. Copy the public key to Github->Accounting Setting->SSH Setting
4. Create remote repository in Github
5. Clone remote repository to local  
git clone [git@github.com:<your github account>/<remote-repository>.git](https://github.com/<your github account>/<remote-repository>.git)
6. Or create a local git repository first, then associate it with the remote one  
Create local git repository: git init  
Associate with remote repository: git remote add origin [git@github.com:<your github account>/<remote-repository>.git](https://github.com/<your github account>/<remote-repository>.git)
